SOLAR GREENHOUSE STRUCTURES

“Optimizing an EcoShade structure to create Agrivoltaic systems makes too much sense.”

Alexis Pascaris
Environmental Energy Policy Expert

Being committed to renewable energy shouldn't come at the cost of losing valuable farm land. Traditional ground-mount PV systems make it almost impossible to use the land for anything else. Building a PV canopy or solar greenhouse instead changes that. Agrivoltaic technology is a dual-use solution that improves food production and reduces water use, while also creating energy and additional revenue.
